

Peer-graded Assignment: Data Mining Example

Instructions

Briefly describe one data mining problem that you may be interested in. Characterize it using the four views of data mining: data, application, knowledge, and technique.

Note: peer grading is anonymous (that is, your name is not seen by others) so long as you do not put your name or other personally identifying information in the title of your submission.

1. Briefly describe the data mining problem you have identified.
2. What types of data may be used?
3. What are the possible applications?
4. What types of knowledge may be learned?
5. What techniques may be used?
